SUBJECT INDEX

Abnormal melting of raw rubber	299	Akron-Croydon and du Pont machines (softeners with).	259
Abrasion resistance tests, laboratory	838	and du Pont abrasion machines.	277
Abrasive index, value of.	277	Analysis, general.	64
wear, resistance to.	268	of natural and synthetic rubber by infrared spectroscopy.	572
wheel, bonded, durability of.	264	Arrangement, molecular, in stretched rubber.	617
Absorption spectrum of ebonite.	231		
Accelerators, organic.	599, 756	Basic reactions occurring during rubber reclaiming. II. Influence of solvent naphtha, storage of the reclaim, and aging of the scrap prior to reclaiming; and infrared spectra of natural-rubber reclaim.	560
stability of.	555	Basicity, effect of.	756
Acetone extraction of vulcanizates.	8	Behavior of different fractions of purified Hevea rubber during vulcanization.	994
Acrylic elastomers, vulcanization of.	966	of rayon tire cord during latex dipping.	245
Acrylonitrile type of synthetic rubber.	735	Biochemical degradation of Hevea latex.	923
Action of organic accelerators in the vulcanization of rubber. Effect of basicity.	756	Birefringence and stresses.	53
Adhesion, cord.	878	Blends, elastomer-resin.	735
Adiabatic reaction kinetics of Buna-S vulcanization.	386	Bombardment, pile, of elastomers.	138
Aging of elastomers. Comparison of creep with some conventional aging methods.	699	Brittleness test, low-temperature.	820
of scrap before reclaiming.	560		
of vulcanized rubber.	1028
